# COLD SMOKE Products

*The most modern scientific method of insect and fungi control.*

## COLD SMOKE DUSTING POWDER

Cold Smoke Dusting Powder is very fine and floats in the air like smoke, gets on the under side of foliage where most pests work.

It is also a fungicide, controlling most of the fungi common to the average garden - Mildew Blight, Rust, Anthracnos, Black Spot. Cold Smoke Dusting Powder is superior -

Because it is effective over a longer period of time, thereby protecting against reinfestation.

Because it is a repellant as well as a killer.

Because it can be applied when foliage is wet or dry.

Because it kills more kinds of insects.

Because it is both fungicide and insecticide. Will keep a garden free of pests. A fertilizer for seed flats, helps to control damp off and develops a fine root system on seedlings.

5 lbs. \$ .75	25 lbs. \$3.00
10 lbs. 1.50	50 lbs. 6.00
	100 lbs. \$10.00

## COLD SMOKE ROOT KNOT CONTROL

It is not a flash. Cold Smoke Root Knot Control is applied in dry powder form and thoroughly mixed in, and immediately plants may be set. The action is slow and unharmed to plant life. Used to drive ants out from along plant roots, and will eradicate snow scale. Alkaline in reaction, a nitroifying bacteria stimulant, and all soil building material. Proven more efficient than steam sterilization for soil treatment for growing Sweet Peas, Delphinium, Asters, and many other plants and flowers. With this material you can grow a crop, control fungi and nematodes and other pests and build up your soil all at the same time.

Use 8 to 12 pounds to 100 square feet spread evenly and mixed thoroughly in top 4 to 6 inches of top soil. Thorough mixing is important.

5 lbs. \$ .50	25 lbs. \$2.00
10 lbs. 1.00	50 lbs. 3.00
	100 lbs. \$6.00

## COLD SMOKE CHINCH BUG CONTROL AND SOIL CORRECTOR

Is the safest, easiest, surest way of controlling Chinch Bugs in lawns. An effective control of Brown Patch. Will not burn or injure grass or plants in any way. An insect repellant; moles stay away from it. It is fine for mixing in a compost heap to make it break down rapidly.

Should be used when turning under a cover crop as it will hasten decay and correct acidity. Should not be mixed with or used at the same time with any fertilizer which contains acid phosphate or any sulphate, but is excellent with anything organic.

Use 5 or 6 pounds to 100 square feet. Spread evenly. Brush over with back of rake or anything light, to shake it down the soil, then sprinkle very lightly, just enough to moisten.

5 lbs. \$ .30	25 lbs. \$1.25
10 lbs. .60	50 lbs. 2.50
	100 lbs. \$4.50

## COLD SMOKE DAMP OFF CONTROL

A fungicide, an insecticide, and a plant food, simple, easy and safe to use. Should be used in all soil in which seeds, roots, bulbs, or small plants are to be planted, whether it be in the greenhouse, garden or field. For best results mix in soil previous to planting for the control of Damp Off and insects.

The value of these materials lies in their remaining in the soil to prevent reinfestation. Having an alkaline reaction and being a stimulant to nitroifying bacteria they have a decided corrective effect on the soil. The material is fool proof as a little variation in quantity used makes little difference. Results obtained recommend its having a place in every greenhouse and garden.

Use 1 pound to 3 or 4 cubic feet of soil. Mix very thoroughly.

5 lbs. \$ .50	25 lbs. \$2.00
10 lbs. 1.00	50 lbs. 3.00
	100 lbs. \$6.00
